CLEAR FROM THE FIRST STEP

Your Vimo.
On the web and in Telegram.

A practical guide to signing in, opening a plan, funding your account and requesting a withdrawal.

Interface example · Your Vimo. On the web and in Telegram.

One account, two ways to sign in

Use the browser account or open MyVimo in Telegram. Your balance, plans and history belong to the same account.

ENGLISH EDITION

November 2026

vimo.bz

About the screenshots. Names, amounts, dates and transactions are demonstration examples, not real service results or statistics. Wallet addresses have been replaced with explanatory text. Screenshots use the English interface.

01 / OPEN VIMO

Choose your way in

Explore the project on the website, manage your account in the browser or use the Mini App inside Telegram.

In your browser

vimo.bz — project website.
vimo.bz/cabinet/ — personal account.
vimo.bz/company/ — company information.

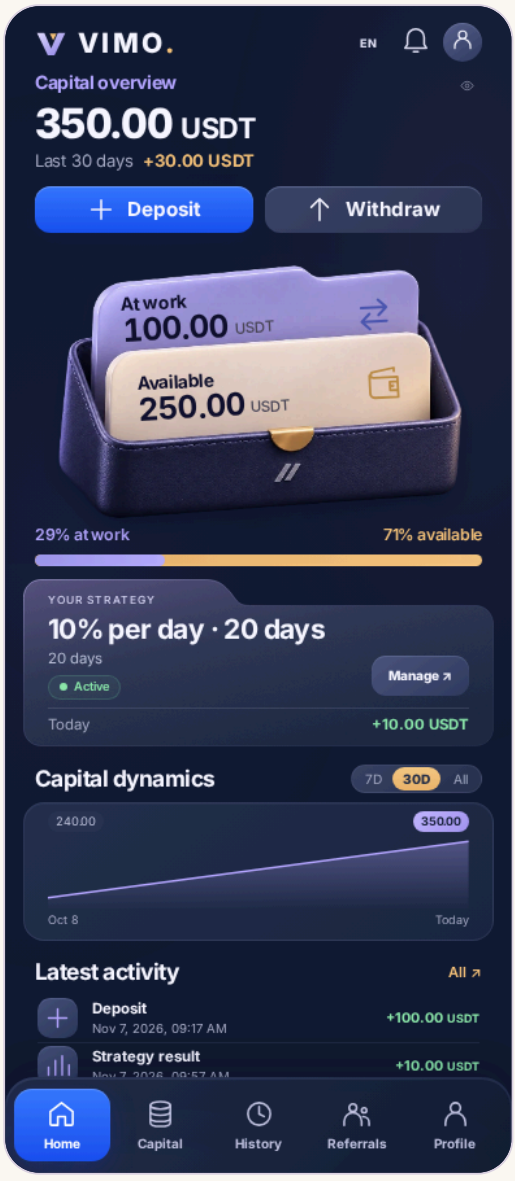

In Telegram

1. Open **@VimoTradebot** and check its username.
2. Select **MyVimo** to open the Mini App.
3. If sign-in is requested, follow the bot's instructions to confirm access to your account.

Find a section

The browser account has a sidebar; on a phone, open it with ☰. The Mini App has a bottom navigation bar, with more actions on its home and profile pages.

> Screenshots and quoted button names in this guide use **English**. You can change the interface language in **Profile → Language**.

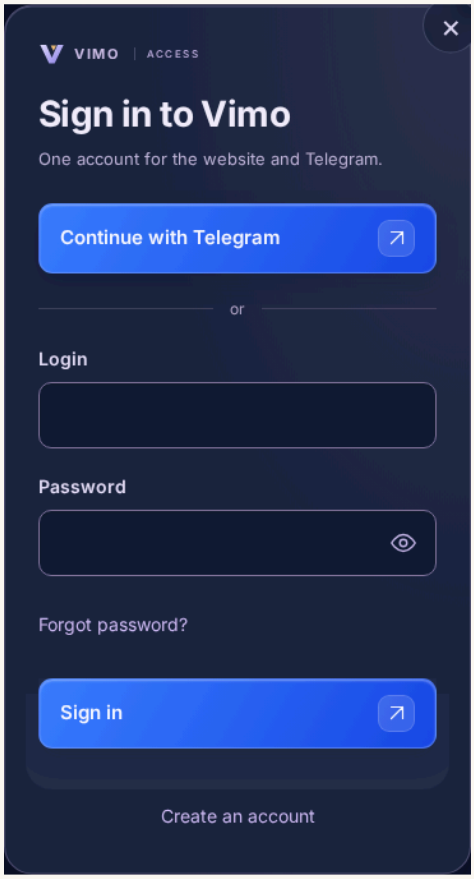

Interface example · Choose your way in

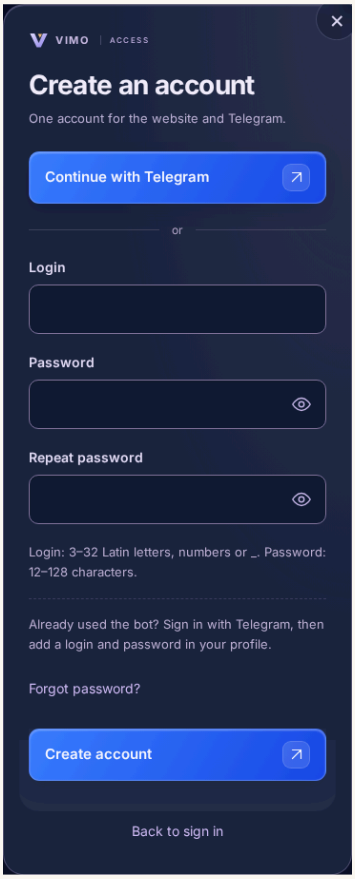

02 / SIGN IN AND REGISTER

Create an account or sign in

If you have already used Vimo through Telegram, sign in through Telegram to keep using the same account.

Interface example · Sign in

Interface example · Create an account

Sign in

1. Open the account sign-in form on the website.
2. Enter your login and password, then select **Sign in**. Or choose **Continue with Telegram** and confirm with the bot.

Register

1. Select **Create an account**. Choose a login and password and repeat the password.
2. Use 3–32 Latin letters, digits or underscores for the login, and 12–128 characters for the password. Select **Create account**.

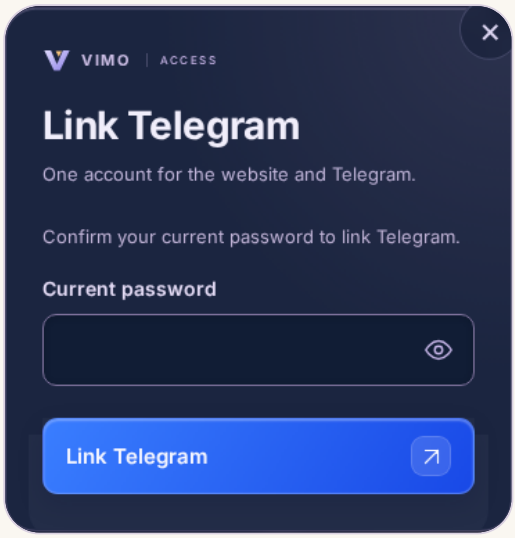

> Store your **recovery key** privately and securely. Do not publish it or include it in messages or screenshots. You will need it to recover access.

03 / ONE ACCOUNT

Link Telegram

Linking adds another way to sign in to your current account.

1. Sign in to the website account you want to use and open **Profile**.
2. Under account access, select **Link Telegram**.
3. Enter the account's **current password** and continue.
4. Open the bot conversation provided and approve the link. Check your profile once it is confirmed.

Interface example · Link Telegram

If Telegram is already linked

A Telegram identity attached to another Vimo account is not automatically reassigned. Sign in through that Telegram account, then add a login and password in its profile.

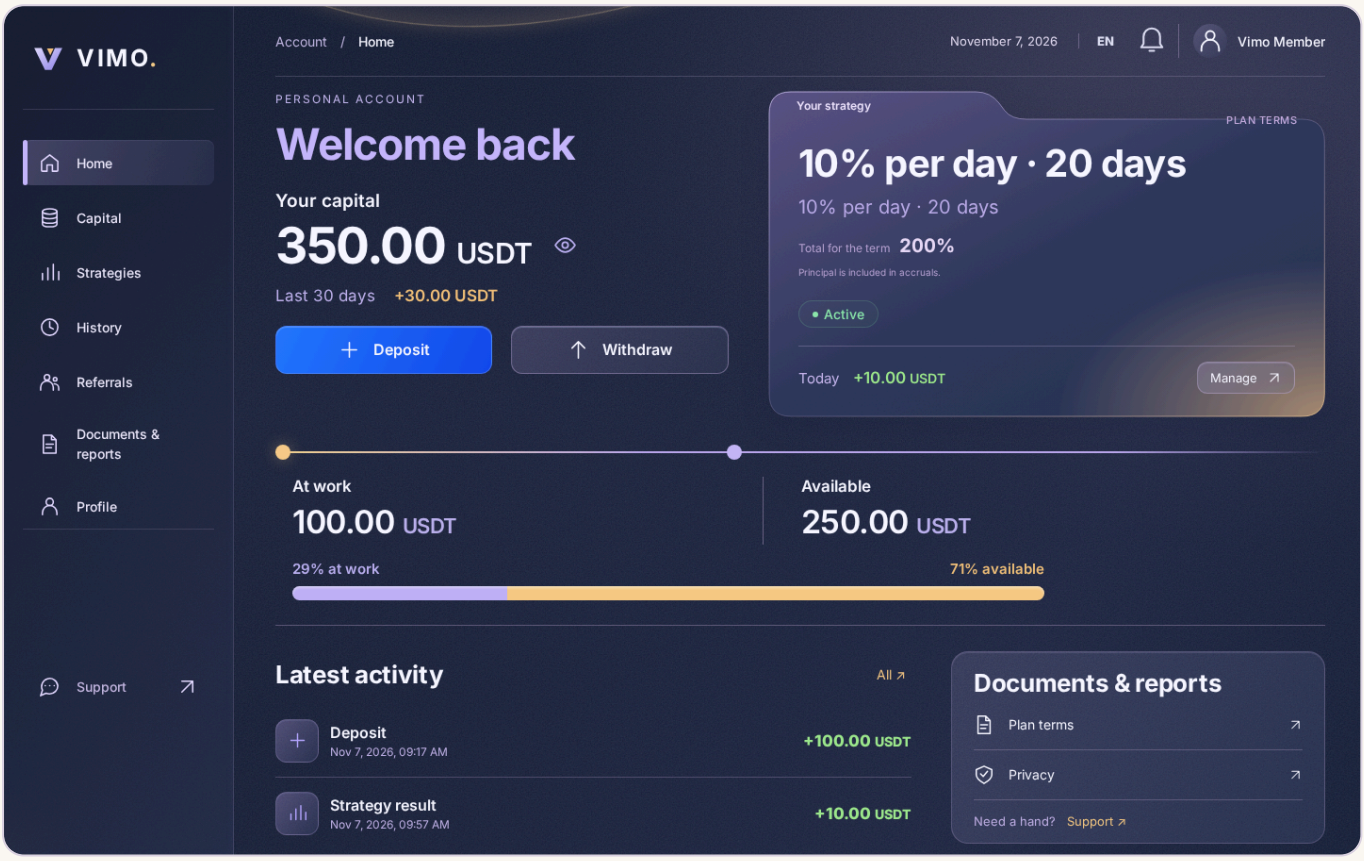

To discuss combining two existing accounts, contact support. You must verify access to both.

> If you first joined through Telegram, sign in that way, then use **Profile → Login and password** to add browser access to the same account.

04 / OVERVIEW

Read your account figures

The home page summarises your capital, active plan and recent transactions.

Interface example · Read your account figures

Understand the balance

Your capital is the overview total. Separate figures show **In work** and **Available**.

In work refers to open plans. **Available** is the main balance you can use for the actions currently offered.

Choose your next action

Deposit opens the asset and network selector.
Withdraw starts a withdrawal request.
Manage takes you to your plan.

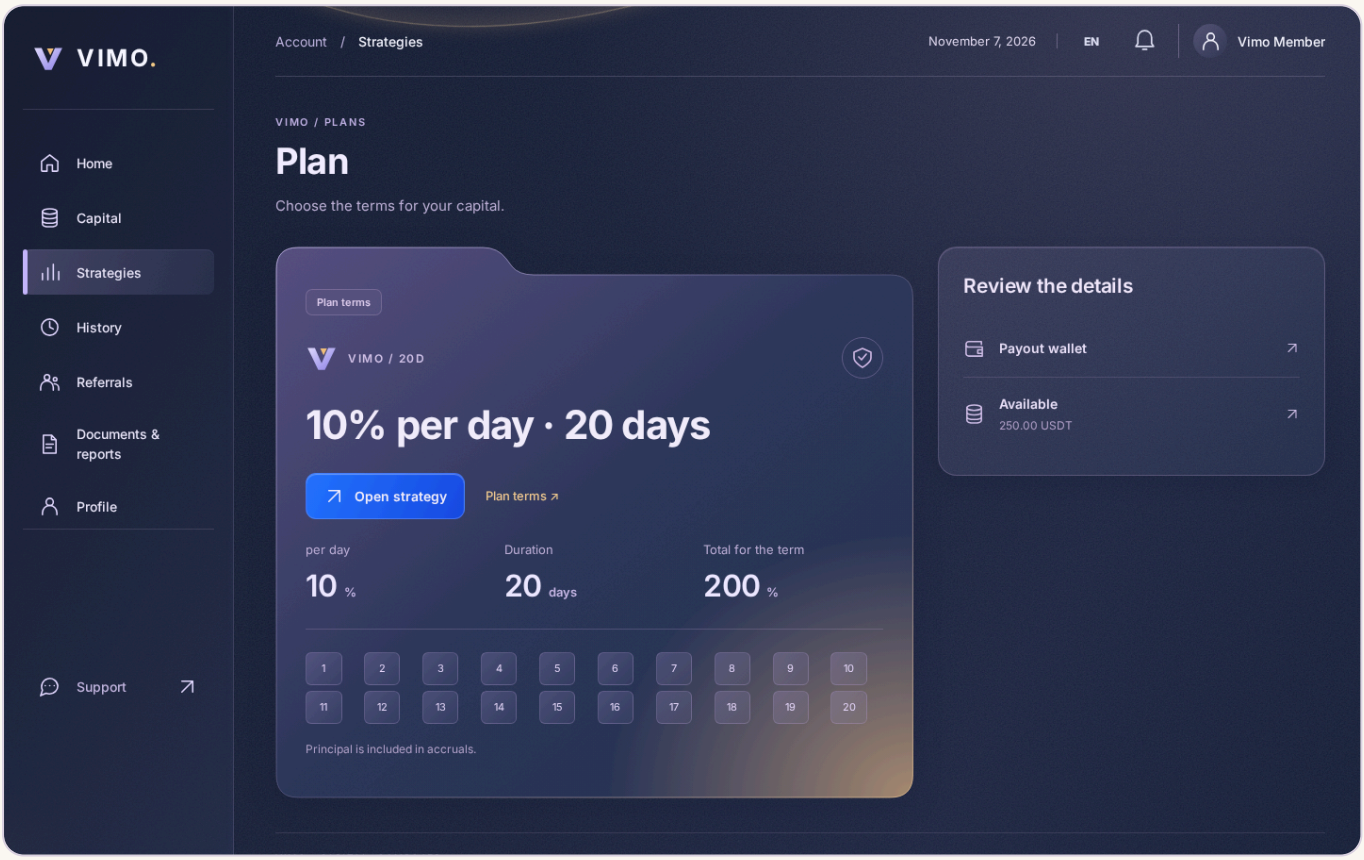

Daily accruals and referral rewards remain on the main balance. You create a withdrawal request when you want a wallet transfer.

> Figures in the illustrations are examples. Sign in to see your own current account data.

05 / PLAN TERMS

Read the terms first

One plan is available under Strategies. Review its card and confirmation form before opening it.

Interface example · Read the terms first

10%
daily under the plan terms

20
days in the plan term

10 USDT
minimum opening amount

Principal is already included

Over 20 days, total accruals under the plan terms are **200% of the deposited amount, including principal**. There is no separate principal repayment after the term ends. Review the terms, amount and payment option before opening.

> Read the plan terms before confirming. Ticking the checkbox means that you accept those terms.

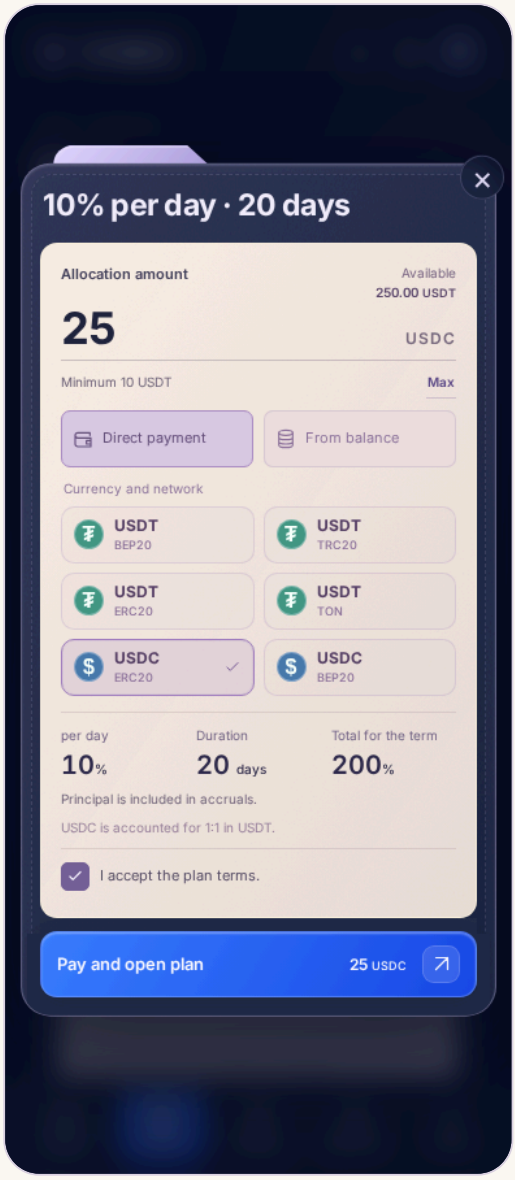

06 / OPEN A PLAN

Pay directly or use your balance

Direct payment does not require a prior balance deposit or a linked payout wallet.

1. Open **Strategies** and select **Open strategy**.
2. Choose **Direct payment** or **From balance**. Balance payment requires enough available funds.
3. For direct payment, select one **asset + network** card. Enter an amount at or above the minimum.
4. Check the amount, asset, term and rate. Read and accept the terms.
5. Select **Pay and open plan**. For direct payment, use the order details provided and send only the specified asset on the specified network.
6. Wait for payment confirmation. Check the order status and find the opened plan under **Capital**.

> A payout wallet is needed for future withdrawals, not for opening a plan by direct payment.

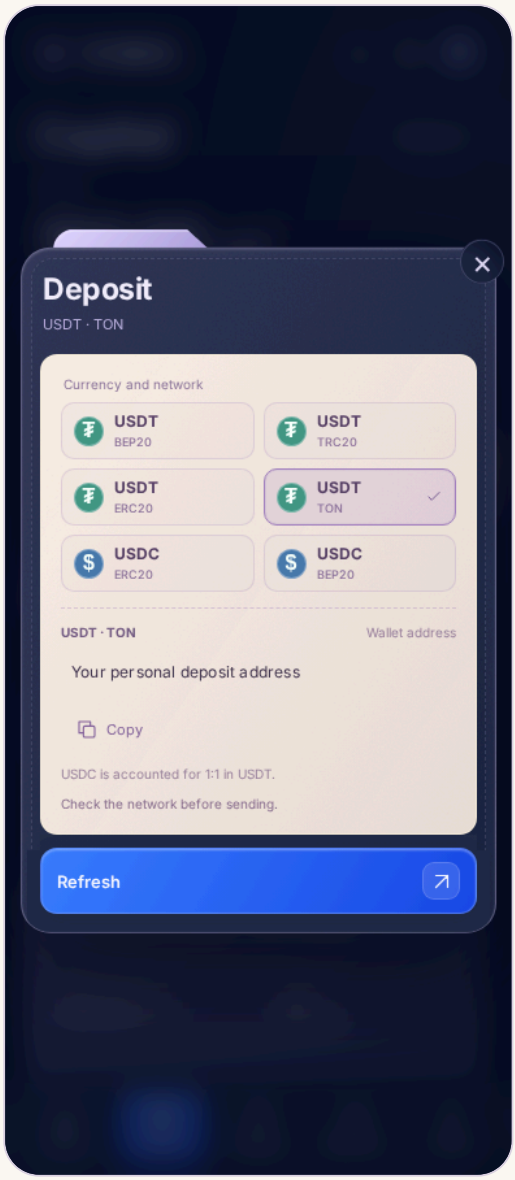

Interface example · Pay directly or use your balance

07 / FUND YOUR BALANCE

Choose the asset and network

Receiving details appear in the same form, below the payment-method cards.

1. From the home page or **Capital**, select **Deposit**.
2. Choose the card matching the asset and network you will send.
3. Select **Get address**. Your personal address appears below, without another window.
4. Use **Copy**. Check the asset, network and address again in your sending wallet.
5. After sending, wait for confirmation. Check your main balance and the entry in **History**.

Interface example · Choose the asset and network

Available pairs

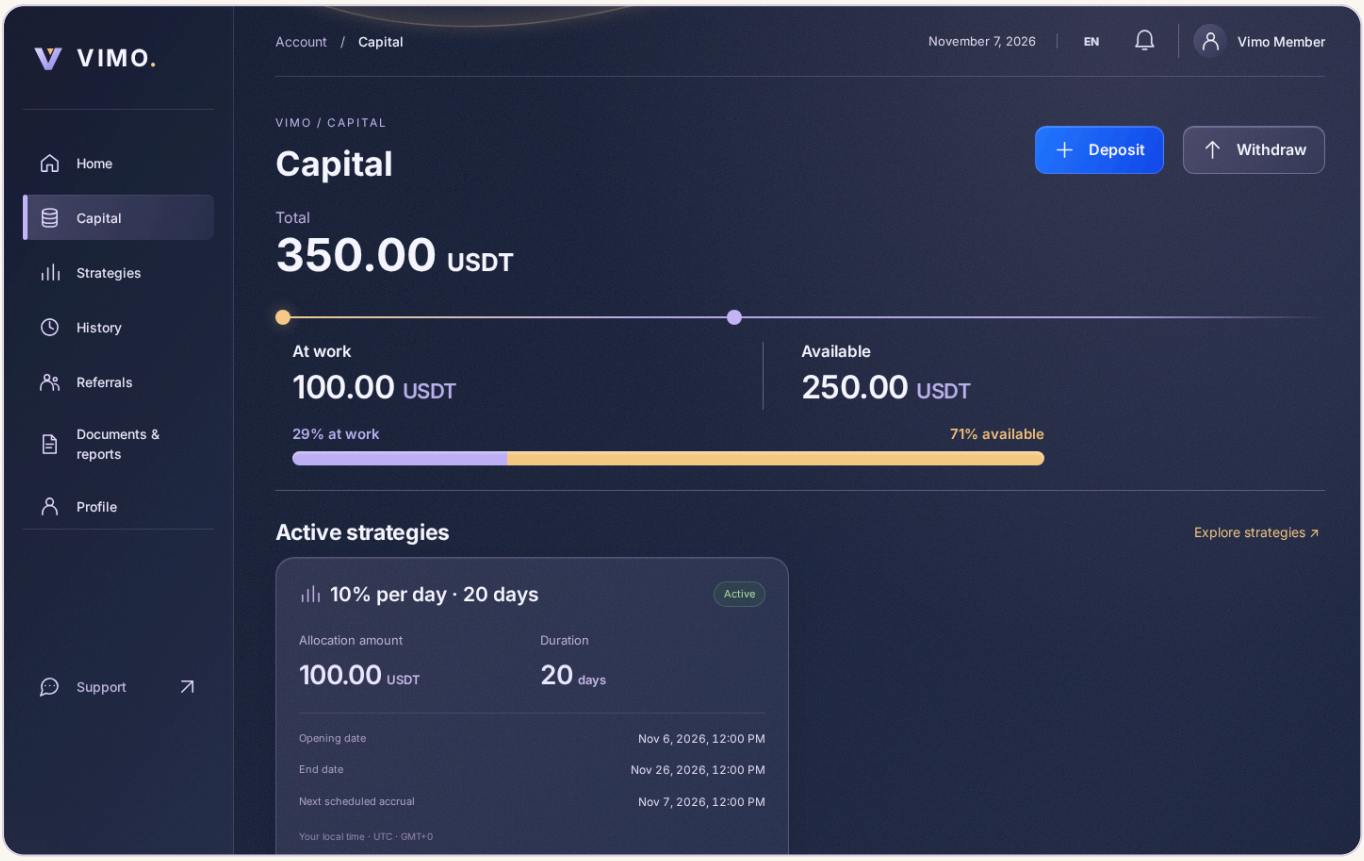

Asset	Networks
USDT	BEP20 · TRC20 · ERC20 · TON
USDC	ERC20 · BEP20

The account unit is **USDT**. USDC is recorded at **1:1**. If you change the pair, obtain its receiving details again; do not reuse a previous address from memory.

08 / CAPITAL

Follow your plan

Capital shows available funds and your active plans.

Interface example · Follow your plan

Check the plan card

1. Open **Capital** and find the active plan.
2. Check its amount, rate, term and accrual progress.
3. Review the opening date, completion date and next accrual time.

Read the dates

Times are displayed in **your device's time zone**. The same transaction may display differently on devices with different time settings.

Daily accruals go to your main balance. To transfer funds to an external wallet, create a withdrawal request.

> If a time looks unfamiliar, check your device's time zone and the zone shown in Profile. Screenshot dates are examples.

09 / PAYOUT WALLET

Add your receiving details

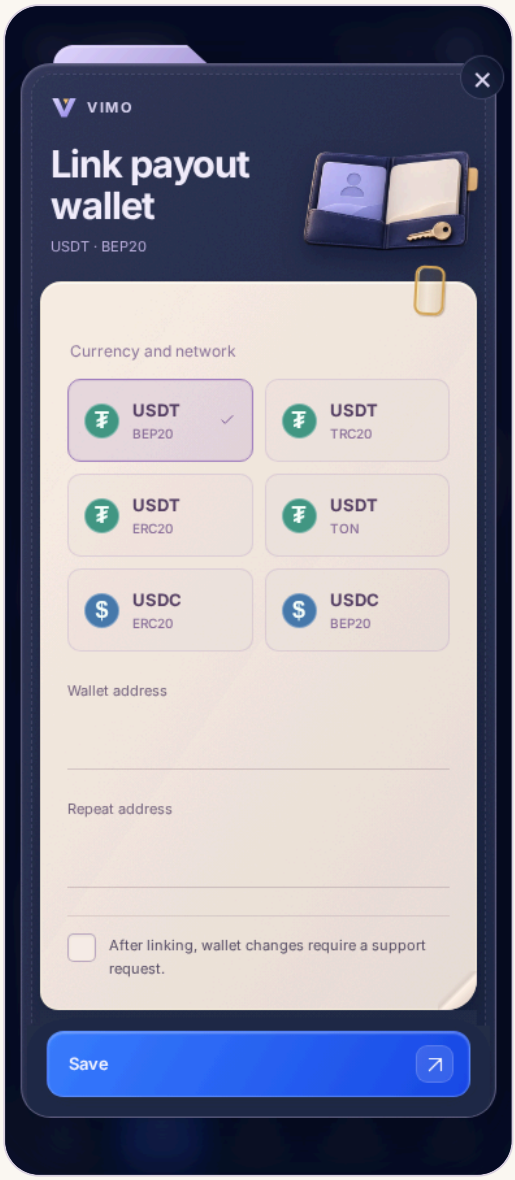

Before your first withdrawal, save a payout wallet. You can also open it from your profile.

1. Select **Withdraw** or open **Profile → Payout wallet**.
2. Choose your wallet's asset and network. The same six pairs are available as for deposits.
3. Enter the address under **Wallet address**, then enter it again under **Repeat address**.
4. Compare both addresses and check that the receiving wallet supports the selected network. For TON, add a comment if the receiving service requires one.
5. Read the wallet-change instructions, tick the confirmation and select **Save**.

Before saving

Check the details against your receiving wallet. A token name alone is not enough: its network must also match.

> **Wallet changes go through support.** After saving, contact Vimo Care if you need to replace the destination details.

Interface example · Add your receiving details

10 / WITHDRAWALS

Create a withdrawal request

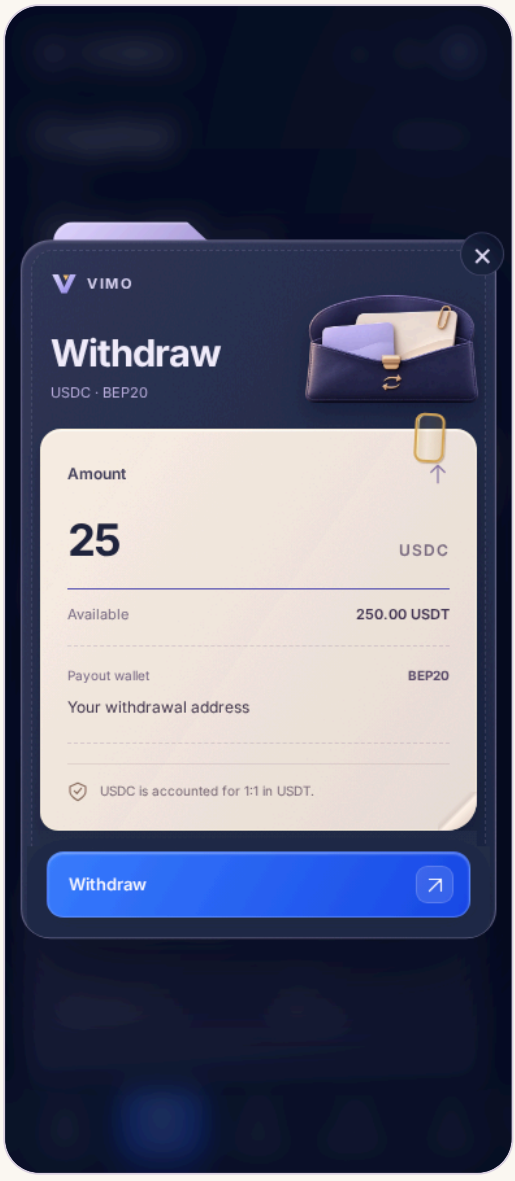

Wallet transfers start with your request. An accrual alone does not trigger an external transfer.

1. Open **Withdraw**. If no wallet is saved, complete wallet binding first.
2. Check the displayed asset, network and destination address.
3. Enter an amount within the form’s limits. USDC is accounted for in USDT at 1:1.
4. Review the details and amount, then confirm with **Withdraw**.
5. Check the status in **History**. Open the entry for details and a receipt if needed.

After the request

Funds are reserved during processing. Completion depends on the payment provider and network confirmation. Creating a request does not mean the funds have already arrived.

> Daily accruals and referral rewards remain on your main balance until you act. For a payment question, give support the transaction number and status.

Interface example · Create a withdrawal request

11 / REFERRALS

Invite with your link

Open the referral section to find your personal link and view your network.

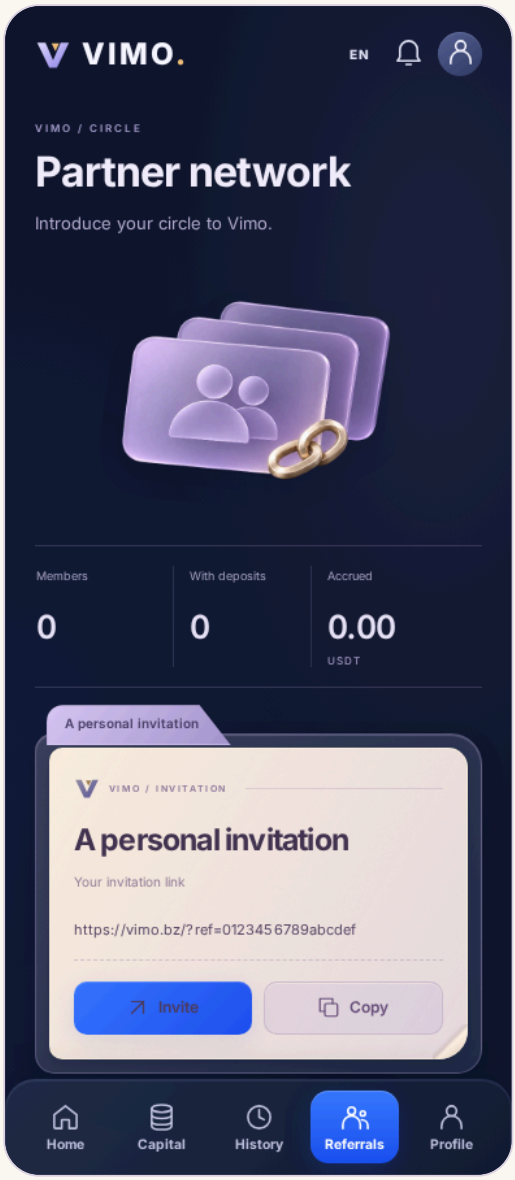

1. Select **Referrals** in the account menu or Mini App bottom bar to open **Partner network**.
2. Copy your personal referral link and share it with the person you want to invite.
3. Track members, network levels and credited referral rewards here.

Five levels

Level	Rate
1	10%
2	4%
3	3%
4	2%
5	1%

Rewards are based on **accruals on referrals' deposits** at the corresponding level and go directly to your **main balance**. Funding transfers and the deposited principal are not the commission base.

> **Example:** a 100 USDT plan accrues 10 USDT daily at 10%. Level 1 earns 10% of that accrual = **1 USDT**. Levels 2–5 earn 0.40 / 0.30 / 0.20 / 0.10 USDT from the same accrual.

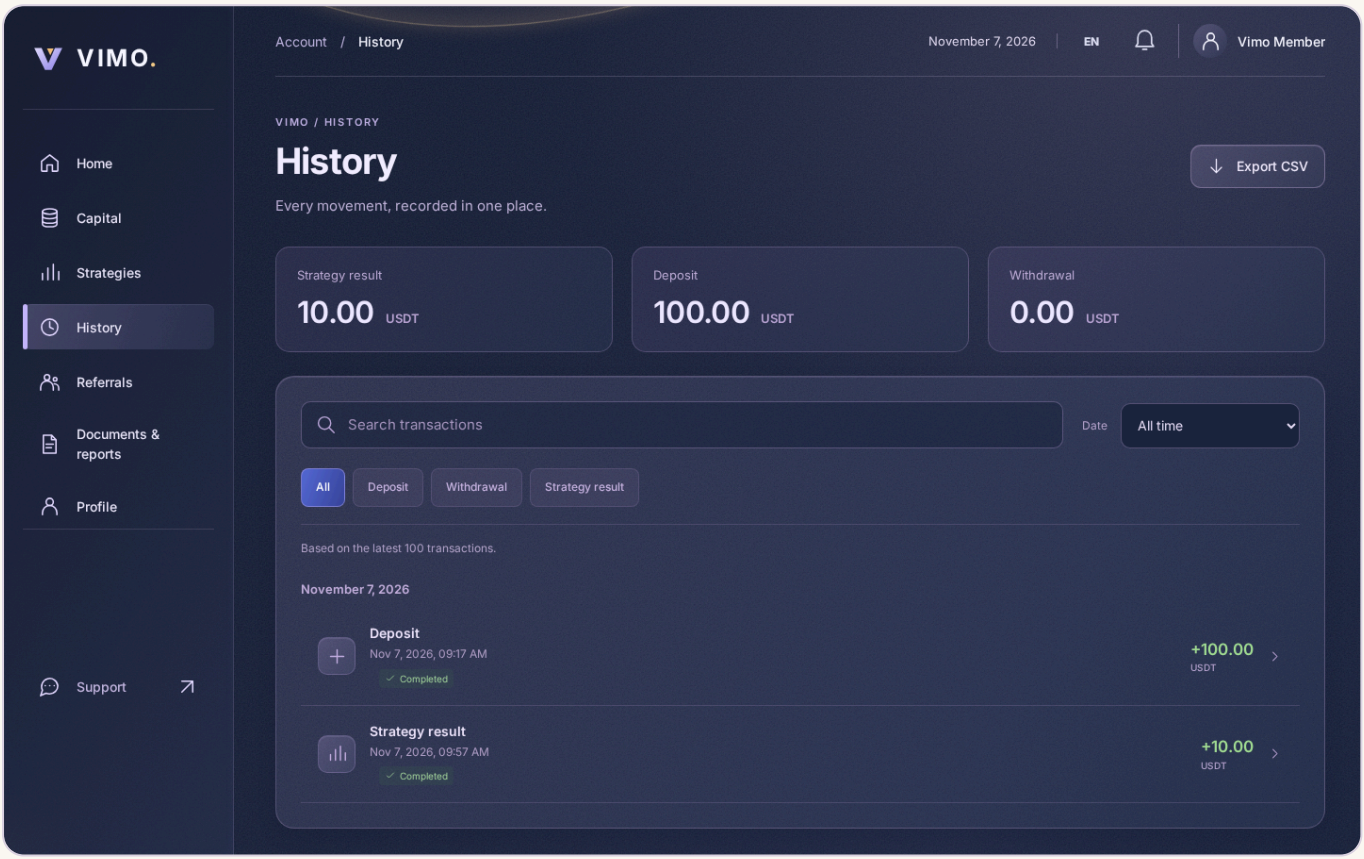

Interface example · Invite with your link

12 / TRANSACTION HISTORY

Find the transaction you need

History helps you check deposits, withdrawals and plan accruals.

Interface example · Find the transaction you need

1. Open **History**. Search, choose a period and filter by transaction type.
2. Find the entry by amount, date and type. Check its status: completed and processing are different stages.
3. Open the entry to view details and its receipt.
4. Select **Export CSV** to download the loaded records to your device.

> If an entry is missing, clear the filters and widen the date range. Give support the details of the specific transaction, not just the account’s total balance.

13 / PROFILE AND ACCESS

Choose your language. Keep your access.

Profile brings together sign-in methods, language, payout wallet and account settings.

Personal settings

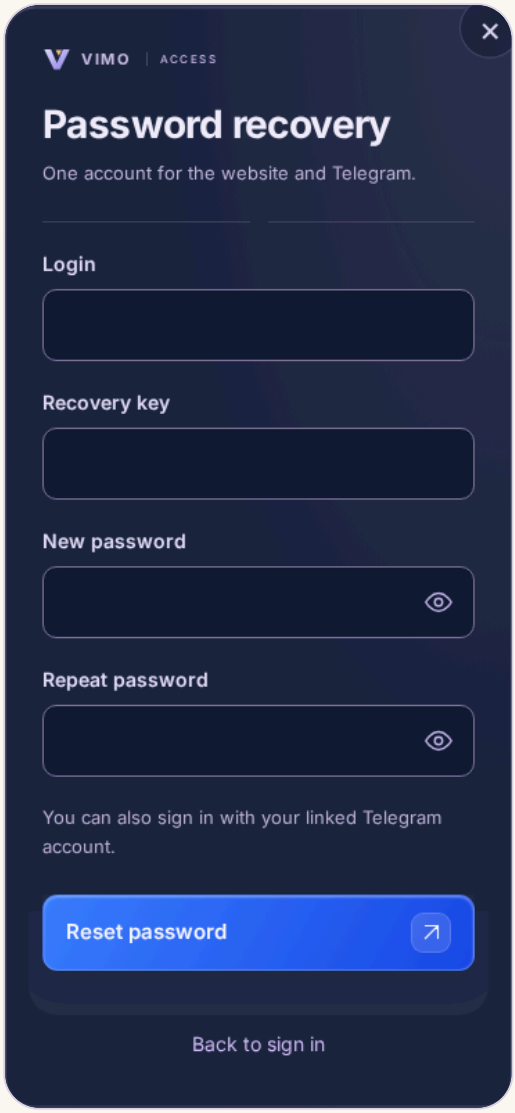

Open **Profile** → **Language**. The interface supports 15 languages and starts in English. All screenshots and quoted controls in this guide use English.

Use **Login and password** to set up web access. If you joined through Telegram, add web credentials here to use the same account in your browser.

If you forget your password

1. In the sign-in form, select **Forgot password?**.
2. Enter your login, private recovery key and a new password. Repeat the password.
3. Select **Reset password**, then sign in with your new credentials.

> If Telegram is linked, you can sign in through it. If you still cannot recover access, contact support. Never include your password or recovery key in a support message.

Interface example · Choose your language. Keep your access.

14 / SUPPORT AND USEFUL LINKS

Contact Vimo Care

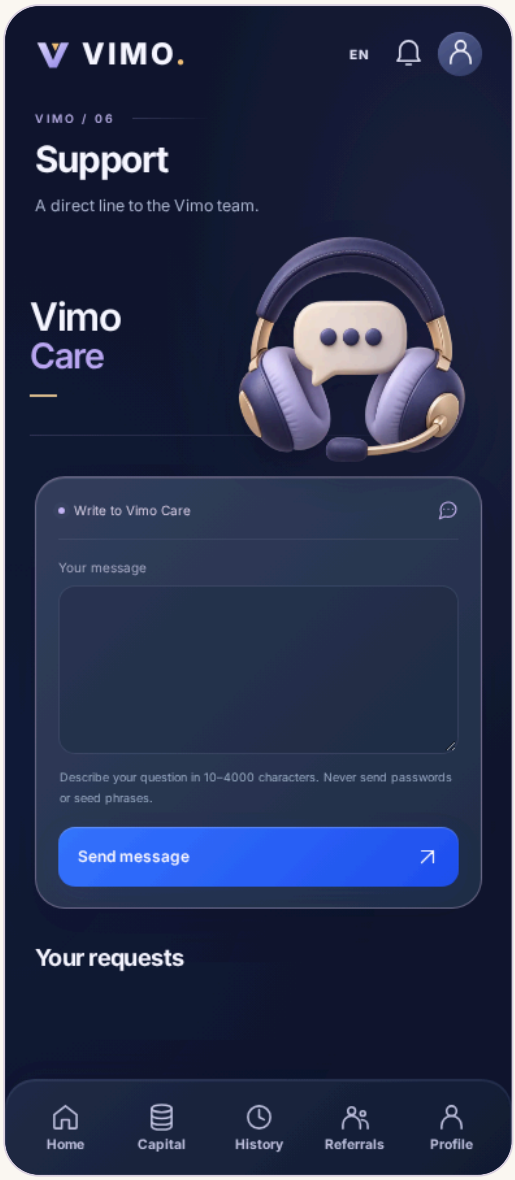

Support is available from the browser account menu and the Mini App profile.

1. Open **Support**.
2. Describe what happened, the section you used and what you expected. For a transaction, include its number, date, amount and status.
3. Add the relevant information without passwords, recovery keys or other secrets.
4. Send your request and follow the reply in the support section.

Quick links

Vimo	vimo.bz
